

Apps for the Mind

Depression

Cognitive behavioral therapy (CBT) apps guide you through one of the most effective treatments for depression: *Moodivate* (\$), *Ginsberg*, *Happify* (\$), and *Activities Mood Tracker*.

Intellicare is a series of free apps that were funded by the National Institutes of Health to treat depression (intellicare.cbits.northwestern.edu)

Brisk walking for 30-45 minutes a day is the type of exercise that treats depression. Walk at home with video guides: walkathome.com or search for “happy walk” or “walk at home” on YouTube.

Anxiety & Depression

Mindfulness: *Headspace* (\$), *Insight Timer*, *Smiling Mind*, *iMindfulness* (\$), and *Mindfulness Daily*.

Deep Breathing: *Breath2Relax*.

Rhythmic Breathing is a form of meditative breathing that has significant antidepressant effects. When practiced daily, it helped people who didn't respond to medications. Search in YouTube for “rhythmic breathing” or “Sudarshan Kriya yoga” to locate videos that can guide you through the practice.

Anxiety

Panic Relief guides people through effective skills for panic attacks including diaphragmatic breathing, and progressive muscle relaxation (\$0.99 for full version).

Agoraphobia Free helps people out of the paralyzing anxiety that keeps them from leaving the house

AnxietyCoach (\$). Developed by the Mayo Clinic, this app guides you through effective tools for anxiety and worry. It has research to support its benefits.

PTSD Coach. Designed by the National Center for PTSD, allows you to track your symptoms, provides

tools for handling stress when it arises, and links to immediate, human help.

Stress Management

Stress Free and *Virtual Hope Box*
DBT Diary Card and Skills Coach

ADHD

Tile: Allows you to locate objects you commonly misplace (www.thetileapp.com, requires the purchase of a tile-tag, approx \$20)

Sleep

An effective therapy for insomnia can be learned through this free app: *CBT-i Coach*.

Shuti (\$) is an online program for insomnia with research supporting its benefits.

Apps can measure your sleep at night, though they give only a rough approximation based on your movements: *Sleep Cycle* for iPhone, *SleepBot* for Android, and *Sleep Time*.

Dawn simulator apps. These use your phone's flashlight to wake you up with a virtual sunrise: *Rise & Shine*, *Lichtwecker*.

Mood Charting

Tracking your mood is the best way to help plan and predict your medication response:

DBSA WellnessTracker: includes more education and allows you to track many things beyond mood.

BioAffect tracks mood through background measures like typing speed (www.biaffect.com). It is a part of a medical research project, so users need to agree to allow their data to be used in that research.

Medications

Medisafe Pill and Med Reminder
